

Soal 3 Segmentasi pelanggan dan komposisi fungsi Harga.

Parameter	Personalisasi	
$N = 10$	$b = 0$	$\theta = 30^\circ$
$a = 1$	$k = 2$	$\alpha = 0.001$

Himpunan Pelanggan

$$A = \{N, N+2, N+4, N+7, N+10, N+13, N+15\}$$

Pelanggan dari media sosial

$$B = \{N+3, N+5, N+7, N+10, N+12, N+18\}$$

Pelanggan dari referral

$$C = \{N+1, N+7, N+10, N+11, N+17, N+20\}$$

Pelanggan dari royalti program

$$\text{Universe } U = \{N, N+1, N+2, \dots, N+30\} \text{ (total 31 pelanggan)}$$

$$\text{Substitusi } N = 10$$

$$A = \{10, 12, 14, 17, 20, 23, 25\}$$

$$B = \{13, 15, 17, 20, 22, 28\}$$

$$C = \{11, 17, 20, 21, 27, 30\}$$

$$U = \{10, 11, 12, \dots, 30\}$$

a) Operasi Himpunan dan Diagram Venn

1) Diagram Venn

↳ Irisan tiga himpunan

$$A \cap B \cap C = \{17, 20\}$$

↳ Irisan 2 himpunan tanpa himpunan ke-3

$$(A \cap B) - C = \emptyset$$

$$(A \cap C) - B = \emptyset$$

$$(B \cap C) - A = \emptyset$$

↳ Elemen yang hanya di satu himpunan

$$A - (B \cup C) = \{10, 12, 14, 23, 25\}$$

$$B - (A \cup C) = \{13, 15, 22, 28\}$$

$$C - (A \cup B) = \{11, 21, 27, 30\}$$

2) operasi himpunan

▷ $|A \cup B \cup C|$

$$A \cup B \cup C = \{10, 11, 12, 13, 14, 15, 17, 20, 21, 22, 23, 25, 27, 28, 30\}$$

$$|A \cup B \cup C| = 15 //$$

▷ $|A \cap B \cap C|$

$$A = \{10, 12, 14, 17, 20, 23, 25\}$$

$$B = \{13, 15, 17, 20, 22, 28\}$$

$$C = \{11, 17, 20, 21, 27, 30\}$$

$$A \cap B \cap C = \{17, 20\}$$

$$|A \cap B \cap C| = 2 //$$

▷ $|(A \cup B) \cap C'|$

$$A \cup B = \{10, 12, 13, 14, 15, 17, 20, 22, 23, 25, 28\} //$$

$$C' = U - C$$

$$U = \{10, 11, 12, \dots, 30\}$$

$$C = \{11, 17, 20, 21, 27, 30\}$$

$$C' = \{10, 12, 13, 14, 15, 16, 18, 19, 22, 23, 24, 25, 26, 28, 29\}$$

Ambil Irisan

$$(A \cup B) \cap C' = \{10, 12, 13, 14, 15, 22, 23, 25, 28\}$$

$$|(A \cup B) \cap C'| = 9$$

▷ $|A \oplus B|$ (symmetric difference)

$$|A \oplus B| = (A \cup B) - (A \cap B)$$

$$(A \cup B) = \{10, 12, 13, 14, 15, 17, 20, 22, 23, 25, 28\}$$

$$(A \cap B) = \{17, 20\}$$

$$(A \oplus B) = \{10, 12, 13, 14, 15, 22, 23, 25, 28\}$$

$$|A \oplus B| = 9 //$$

Hasil Akhir (kesimpulan)

1) $|A \cup B \cup C| = 15$

2) $|A \cap B \cap C| = 2$

3) $|(A \cup B) \cap C'| = 9$

4) $|A \oplus B| = 9$

(b) matlab

(c) diketahui : 2 fungsi harga

▷ Harga eceran ; $f(x) = K \cdot x + (a+b)$

▷ surcharge ; $g(x) = x^2 / (b+1) + a$

Parameter : $a=1$, $b=0$, $k=2$

Fungsi :

$$f(x) = 2x + (1+0) = 2x + 1$$

$$g(x) = \frac{x^2}{0+1} + 1 = x^2 + 1$$

Jawaban :

D/ $(f \circ g)(x)$ & $(g \circ f)(x)$

$$\begin{aligned} f \circ g(x) &= f(g(x)) \\ &= 2(x^2 + 1) + 1 \\ &= 2x^2 + 2 + 1 \\ &= 2x^2 + 3 // \end{aligned}$$

$$\begin{aligned} g \circ f(x) &= g(f(x)) \\ &= (2x + 1)^2 + 1 \\ &= 4x^2 + 4x + 1 + 1 \\ &= 4x^2 + 4x + 2 // \end{aligned}$$

D/ Uji komutatif

Komposisi komutatif jika : $f(g(x)) = g(f(x))$

diuji dengan nilai : $x = b+2 = 0+2$
 $x = 2$

$$\begin{aligned} f(g(2)) &= 2x^2 + 3 \\ &= 2(2)^2 + 3 \\ &= 11 // \end{aligned}$$

$$\begin{aligned} g(f(2)) &= 4x^2 + 4x + 2 \\ &= 4(2)^2 + 4(2) + 2 \\ &= 26 // \end{aligned}$$

$$11 \neq 26$$

∴ fungsi komposisi tidak komutatif karena $f(g(x)) \neq g(f(x))$

d. Invers fungsi & penentuan Nilai x

$$\text{Fungsi : } f(x) = 2x + 1$$

D/ Invers fungsi : $f^{-1}(x)$

$$y = f(x) = 2x + 1$$

tukar x dan y

$$x = 2y + 1$$

$$x = 2y + 1$$

$$x - 1 = 2y$$

$$y = \frac{x-1}{2}$$

Invers

$$f^{-1}(x) = \frac{x-1}{2} //$$

D/ menentukan Volume pembelian x

diketahui : $Pp(k \cdot 100 + a + b)$

ditanya : Volume x yang menghasilkan.

jawaban :

$$\begin{aligned} 1k \cdot 100 + a + b &= 10 - 2(100) + 1 + 0 \\ &= 200 + 1 \\ &= 201 \end{aligned}$$

gunakan fungsi $f(x)$

$$f(x) = 2x + 1$$

$$201 = 2x + 1$$

$$200 = 2x$$

$$x = 100 //$$

∴ Volume pembelian yang menghasilkan pendapatan tersebut adalah 100 unit

note : Volume pembelian = jumlah barang yang dibeli pelanggan.

Ⓔ) klasifikasi fungsi f dan g

Diketahui :

$$f(x) = 2x + 1$$

$$g(x) = x^2 + 1$$

domain ke domain

$$fig : \mathbb{R} \rightarrow \mathbb{R}$$

1) klasifikasi fungsi $f(x) = 2x + 1$

a) uji Injektif

$$\text{syarat : } f(x_1) = f(x_2) \Rightarrow x_1 = x_2$$

Pembuktian

$$f(x_1) = f(x_2)$$

$$2x_1 + 1 = 2x_2 + 1$$

$$\frac{2x_1}{2} = \frac{2x_2}{2}$$

$$x_1 = x_2$$

∴ fungsi injektif

b) uji surjektif

syarat : $\forall y \in \mathbb{R}, \exists x \in \mathbb{R}$ sehingga $f(x) = y$

$\forall y \in \mathbb{R}$ = untuk setiap nilai di kodomain

$\exists x \in \mathbb{R}$ = ada minimal satu x di domain

: atau semua nilai (hasil output) dapat ditemukan nilai x .

$$f(x) = y = 2x + 1$$

$$x = \frac{y-1}{2}$$

$$x \in \mathbb{R}, y \in \mathbb{R}$$

$$\text{misal } y = 10$$

$$x = \frac{10-1}{2}$$

$$x = 4,5$$

$$\text{misal } y = -5$$

$$x = \frac{-5-1}{2}$$

$$= -3 //$$

jadi selalu ada nilai

x untuk setiap y dan sebaliknya.

∴ fungsi surjektif

Kesimpulan :

karena fungsi injektif dan surjektif maka fungsi $f(x)$ = bijektif //

2) klasifikasi fungsi : $g(x) = x^2 + 1$

a) uji injektif

$$g(x_1) = g(x_2) \Rightarrow x_1 = x_2$$

$$\text{misal : } x_1 = 2 \text{ \& } x_2 = -2$$

$$2x_1^2 + 1 = 2x_2^2 + 1$$

$$2(2)^2 + 1 = 2(-2)^2 + 1$$

$$9 = 9$$

tetapi $x_1 \neq x_2$, karena 2 bilangan sama

ber nilai positif dan negatif jika

dikuadratkan hasilnya akan sama

b) uji surjektif

$$g(x) = y$$

$$g(x) = x^2 + 1$$

$$y = x^2 + 1$$

$$\text{misal } y = 0$$

$$x^2 + 1 = 0$$

$$x^2 = -1 \text{ (maka hasil tdk Real)}$$

$$\text{atau misal } y = -5$$

$$x^2 + 1 = -5$$

$$x^2 = -6 \text{ (bilangan tdk Real)}$$

Kesimpulan

fungsi $g(x)$ bukan injektif, surjektif, dan bukan bijektif

fungsi $g(x)$ merupakan fungsi kuadrat
